

Services Portfolio

TOWERS GROUP
Business Synergy

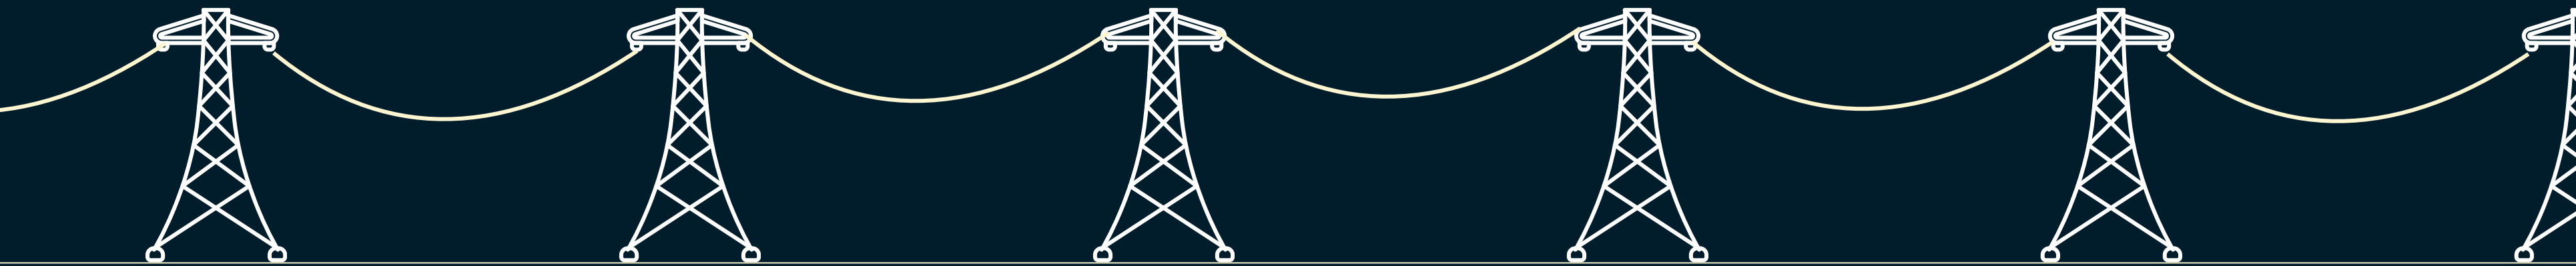

About Us

At **Towers Group**, we provide comprehensive electrical solutions for the energy sector, based on extensive experience in electrical infrastructure, substations, transmission systems, and industrial, commercial, and residential projects.

We provide extensive support from conceptual engineering to final implementation ,guaranteeing **efficiency**, **safety**, and **adherence** with regulatory standards in every project.

Our expertise allows us to deliver reliable and customized solutions that comply with the highest **quality standards** and current regulations in the electricity sector.

TOWERS GROUP

Mission

At **TOWERS GROUP**, our mission is to elevate energy to a new standard of **efficiency, safety, and reliability**.

We design, build, and optimize electrical systems that propel the industrial, commercial, and residential advancement of our clients, delivering tailored solutions grounded in engineering, technology, and expertise.

We are dedicated to each of our projects, offering specialized **technical guidance**, continuous innovation, and execution that adheres to the highest standards of quality and compliance.

We serve as a strategic partner, ensuring that each electrical connection fosters progress, sustainability, and trust.

Vision

At **TOWERS GROUP**, we envision a future in which energy serves as a driving force for sustainable and technological development across the global landscape we engage with.

Our vision is to establish ourselves, in the medium term, as a premier international electrical engineering firm, distinguished by our professional excellence, dedication to electrical safety, and innovative solutions that create value for our clients and communities.

To serve as a benchmark in the industry for our capacity to integrate knowledge, experience, and environmental stewardship, thereby contributing to a more efficient, reliable, and sustainable energy transition.

Engineering Solutions

High and Medium Voltage Systems

Design of electrical connection
systems for new industrial facilities

Basic and detailed
engineering of electrical lines and substations.

Formulation and structuring
of electrical projects.

Loadability analyses, power flow assessments,
and short circuit evaluations.

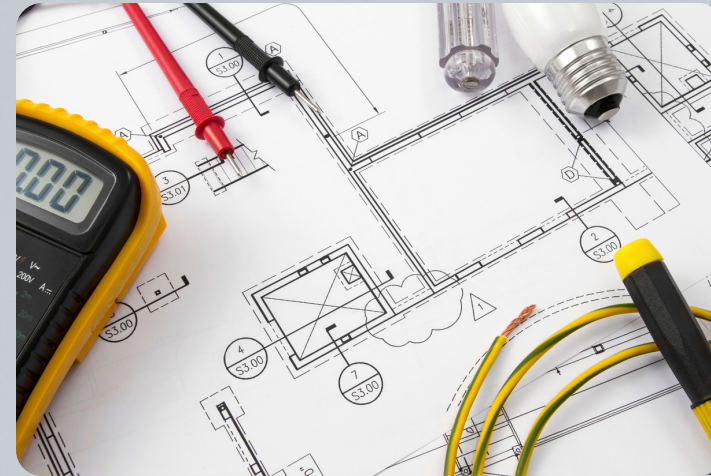

Coordination and adjustment
analyses of protections (EACP).

Technical evaluations of
current electrical infrastructure.

Consulting services in regulatory compliance, load capacity
assessment, system expansion, and electrical reliability.

Low Voltage

Electrical designs for industrial, commercial, and residential applications.

Electrical enhancements and renovations in structures, educational facilities, and industrial plants.

Emergency services (transformer replacement, component replacement, reconnections, and repairs).

Modernization of switchboards, grounding systems, conduits, and lighting systems.

Technical inspections and electrical diagnostics.

Consulting and Project Development

We provide extensive energy project development services, encompassing consulting on energy efficiency, regulatory compliance, and user connection procedures. We perform technical evaluations to assess design and expansion options, guaranteeing optimal solutions.

Additionally, we offer specialized consulting services in permit management, the preparation of technical documentation, and procedures for operators and regulatory entities, ensuring efficient development in compliance with sector requirements.

Electrical Supplies and Technical Assistance

We provide **integrated electrical supply** and material management solutions, ensuring full compliance with project specifications, technical standards, and quality requirements, supported by efficient and reliable logistical coordination.

We coordinate directly with electric utilities and **international** partners to ensure dependable **supplies customized** to meet the specific needs of each project.

Additionally, we offer **technical support** throughout the assembly, testing, and commissioning phases, guaranteeing an efficient and secure implementation.
